Remark on the master's dissertation and the oral presentation

Abstract

Table of contents

1 Introduction 2
1.1 Motivation 2
1.1.a Research questions 2
2 Programmable photonics 3
2.1 Photonic processors 3
2.1.a Feedforward and recirculating mesh 3
2.1.b Potential use cases of photonic processors 3
2.1.c Embedding of photonic processor in a larger system 3
2.2 Circuit representation 3
2.2.a Bi-directional systems 3
2.2.b Feedforward approximation 3
2.3 Initial design requirements 3
2.3.a Interfacing 3
2.3.b Programming 3
2.3.c Reconfigurability 3
2.3.d Tunability 3
3 Programming of photonic processors 4
3.1 Analysis of existing software ecosystems 4
3.1.a Compiler and runime 4
3.1.b Code editors 4
3.1.c Formatting 4
3.1.d Linting 4
3.1.e Testing 4
3.1.f Debugging 4
3.2 Analysis of programming paradigms 4
3.2.a Imperative programming 4
3.2.b Functional programming 4
3.2.c Object-oriented programming 4
3.2.d Logic programming 4
3.2.e Dataflow programming 4
4 Translation of intent 5
5 The PHÔS programming language 6
6 Examples of photonic circuit programming 7
6.1 Using traditional programming languages 8
7 Extending PHÔS to generic circuit design 9
8 Simulation in PHÔS 9
8.1 Co-simulation with digital electronic 10
8.2 Towards co-simulation with analog electronic 10
9 Future work 11
10 Conclusion 12
11 Conclusion 12
12 Conclusion 12
13 Conclusion 12
14 Conclusion 12
15 Conclusion 12

16 Conclusion 12
17 Conclusion 12

Glossary

List of figures

List of tables

List of code listings

Introduction
Motivation
Research questions

Programmable photonics
Photonic processors
Feedforward and recirculating mesh
Potential use cases of photonic processors
Embedding of photonic processor in a larger system
Circuit representation
Bi-directional systems
Feedforward approximation
Initial design requirements
Interfacing
Programming
Reconfigurability
Tunability

Programming of photonic processors
Analysis of existing software ecosystems
Compiler and runime
Code editors
Formatting
Linting
Testing
Debugging
Analysis of programming paradigms
Imperative programming
Functional programming
Object-oriented programming
Logic programming
Dataflow programming

Translation of intent

The PHÔS programming language

Examples of photonic circuit programming

Using traditional programming languages

Extending PHÔS to generic circuit design

Simulation in PHÔS

Co-simulation with digital electronic

Towards co-simulation with analog electronic

Future work
